DETAILED ACTION Foreign Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers

have been placed of record in the file.

Election/Restriction

Applicant's election of Group II claims 12 through 22 in the reply filed on 10/28/04 is

acknowledged. Because applicant did not distinctly and specifically point out the supposed

errors in the restriction requirement, the election has been treated as an election without traverse

(MPEP § 818.03(a)).

Claim 1 through 11 have been withdrawn from further consideration pursuant to 37 CFR

1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking

claim. Election was made without traverse in the reply filed on 10/28/04.

Additionally, for clarification of the record, claim 23 is a product claim, drawn to a

test structure and should have been included in Group I of the restriction requirement,

mailed 10/05/04. Therefore, claim 23 has been withdrawn form further consideration as

well.

Specification

The disclosure is objected to because of the following informalities: Page 15 line 15;

"structure 200" should read "structure 2".

Application/Control Number: 10/649,051

Art Unit: 2812

Appropriate correction is required.

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

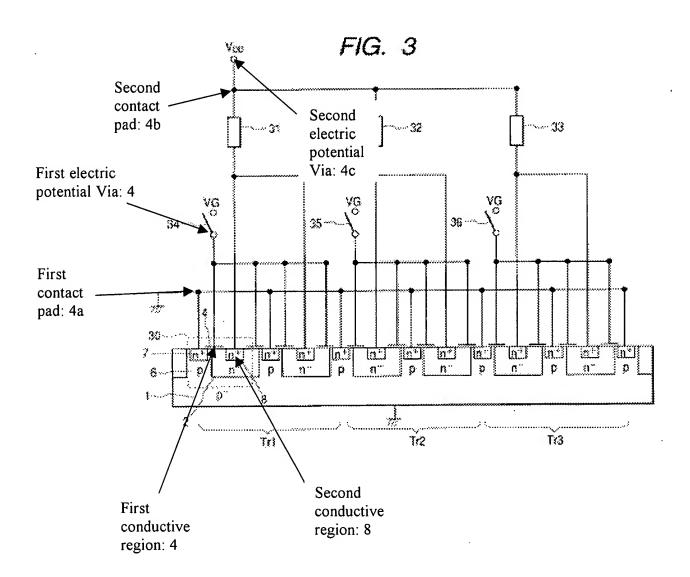

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 12 through 14 are rejected under 35 U.S.C. 102(e) as being anticipated by Shimotsusa et al (U.S. Pat 6,825,543 B2)

Shimotsusa et al (U.S. Pat 6,825,543 B2), for Claim #12, shows a method, comprising: commonly connecting first conductive regions (gates) of a plurality of circuit elements (transistors) of a semiconductor structure (Fig. 3, item 2, column 10, line 10 through 13) with a first electric potential (V_g) via (Fig. 3, item 4, column 11, line 29 through 33) a first common contact pad (item 4a, shown below); commonly connecting second conductive regions (item 8, drains) of said plurality of circuit elements (item Tr1) of said semiconductor structure, with a second electric potential (V_{DD}) via (item 4c, shown below) a second common contact pad (item 4b, shown below), said first and second

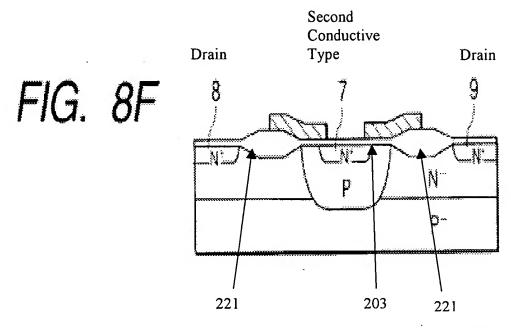

Art Unit: 2812

conductive regions being insulated from each other by a dielectric (fig. 8f - 8g); and assessing a reliability of said dielectric by determining failure events of said circuit elements, (column 35, line 31 through 41, line 47 through 54).

Application/Control Number: 10/649,051

Art Unit: 2812

Field oxide (221), and gate isolation films (203) See col. 14, lines 46-55.

With respect to **Claim #13**, the method of claim 12, wherein determining said failure events includes detecting abrupt changes of a signal indicative of a dielectric breakdown of said dielectric, is taught by Shimotsusa et al (U.S. Pat 6825543 B2), (column 10, line 55 through 60).

Furthermore, **Claims #14,** The method of claim 13, wherein said signal represents a leakage current through said dielectric, is taught by Shimotsusa et al (U.S. Pat 6825543 B2), (column 10, line 55 through 67, column 16, line 1 through 7).

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: While the prior art teaches a first and second common connecting well region and first and second electric potential and contact pad for their connections, it fails to teach "connecting a common well region of said plurality of transistor elements to a third electric potential by a third contact pad" and "connecting an N-well region of said at least one P-channel transistor structure to a third electric potential by a third contact pad."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 15 through 22 are allowable.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866 – 217 – 9197 (toll-free).
